HEYCO Qualitätswerkzeuge GmbH & Co. KG

Adjustable torque wrench with one-hand clamp – the ideal tool for builders, concretors and for general engineering- and plant construction applications.
Easy screwing of reinforcing rods and socket joints for reinforced concrete applications. The one-hand clamp is best suited for round, oval and square shapes. For application with products of all renowned manufacturers of reinforcement gear (e.g. Lenton, Halfen etc.). The hardened adjusting nut and grips in combination with the spring centering prevent an unintended mechanical shift of the wrench ensuring utmost safety of the self-clamping.

Supplied in a cushioned bag with carrying strip for safe transport to the building site, optimum dirt and moisture protection.
